Mohammad Fawzi Asad

Software Engineer
Dubai, UAE | mfaaak@hotmail.com | LinkedIn | GitHub

Summary

Full-Stack Software Engineer with nearly two years of experience building and shipping production web applications, including a large ERP platform and Tiraz, a live AI interior-design platform. Specialized in Spring Boot, React, and Next.js, with hands-on work across data pipelines, containerized deployments, AWS infrastructure, and event-driven service integration using Kafka. Experienced in designing RESTful APIs, optimizing PostgreSQL performance, and delivering secure, maintainable code in collaborative, review-driven teams.

Skills

Programming Languages: Java, Python, JavaScript, TypeScript
Web Development: Spring Boot, React, Next.js, Node.js, FastAPI, HTML, CSS, PostgreSQL, Oracle
DevOps & Tools: Git, Jenkins, GitHub Actions, AWS, Docker, Kafka, Microservices, RESTful APIs, Postman, Testing

Experience

Junior Software Engineer · Gauge Solutions — Amman *Feb 2025 – Aug 2026*

- Developed and enhanced full-stack modules for a production ERP platform spanning inventory, user management, reporting, **POS, and e-commerce**, using React, Next.js, and Spring Boot.
- Integrated the ERP with a separate invoicing service through **event-driven messaging using Kafka**, enabling reliable asynchronous data flow across services.
- Designed **RESTful APIs** and optimized PostgreSQL queries, reducing response times by 25%.
- Integrated an AI chatbot and Google Cloud Vision OCR into the ERP system, automating document processing and enabling natural-language interactions within business workflows.
- Containerized services with **Docker** and automated **CI/CD pipelines** with Jenkins, reducing deployment time by 30% and minimizing manual release errors.

Advanced Data Analytics Training Program · Correlation One (Remote) *Oct 2024 – Mar 2025*

- Built regression models and statistical analyses with SQL and Python, driving up to 20% growth in customer acquisition.
- Automated data workflows with Pandas and Excel, reducing preparation time by 40%.

Projects

Tiraz — AI Interior Design Platform tiraz.sa

- Built the **product data pipeline** in Python that ingests, normalizes, and classifies **40,000+ products** from five major Saudi furniture retailers' online catalogs, with retries, circuit breakers, and automated failure reports.
- Developed **room-size-aware furniture selection** that fits products to a room's floor area, style, and color, powering the platform's AI room designs.
- Built the **React/TypeScript design flow** (photo upload, room measurement, redesign) and an admin panel for user credits and design analytics on a **Spring Boot** backend.
- Integrated **Tap payments** with reliable credit grants, and deployed with **Docker on AWS** (EC2, ECR) using GitHub Actions CI/CD.

Tech Stack: Spring Boot, React, TypeScript, Python, FastAPI, PostgreSQL, Docker, AWS

Matjari — E-Commerce Platform GitHub

- Built a full-stack marketplace with **secure backend services** for listings, authentication, and order handling using Node.js and PostgreSQL.
- Implemented AI-powered image-based product search using Azure Vision API, improving product discovery accuracy.
- Developed real-time chat functionality for direct buyer–seller communication.

Tech Stack: React, Next.js, Node.js, PostgreSQL, Azure Vision API

Education

B.Sc. in Software Engineering · Jordan University of Science and Technology *Oct 2021 – Jun 2025*
Excellent standing — GPA 3.99 / 4.0
